

APPLICATION OF SARVAM AI -PART 1

PRODUCT POSITIONING

- Kivi is the voice layer for how India actually works speaking in Hindi, English, and everything in between, across every app on the machine.
- It belongs to Indian knowledge workers who think faster than they type and switch languages mid-sentence, not English-first Dictation tool which works well if spoken in english and not if spoken Hinglish
- Its value is depth in Indian languages plus OS-wide reach, not another app which does English transcriber. People keep it because it disappears into their workflow — one keystroke, no window-switching, no cleanup.
- Kivi is not an English dictation tool with Indian languages added later.
